

MERITO UFT PHOENIX

Modernize your UFT automation to Python

Your automation framework is one conversion away from being **AI ready.**

Merito UFT Phoenix moves your OpenText UFT One suite from VBScript to Python without rewriting a tests by hand, and without giving up the investment your team has already made.

WHY THIS MATTERS NOW

01 VBScript is on its way out of Windows.

Microsoft has formally deprecated VBScript and laid out a phased plan to remove it from Windows. The direction is set. Every year your automation stays on VBScript is another year further from where the rest of your engineering organization already is.

02 Python is where OpenText went.

OpenText Functional Testing supports Python as a first class scripting language. The platform you already own has a modern path forward. Most teams simply have not been able to take it, because the suite they built over the last decade is written in something else.

03 Python is the language AI works in.

AI coding assistants, modern pipelines, code review tooling and quality gates all speak Python. A VBScript suite sits outside all of it. The moment your tests are Python, your team can point your LLM at them and start writing new coverage in a fraction of the time it used to take.

A regression suite your team can maintain, extend with AI, and hand to any modern engineer. Same tests. Same history. It's a language with a bright future.

Keep the platform. Keep the suite. **Change the language.**

WHAT PHOENIX DOES

No rewrite

Your VBScript tests convert to UFT Python automatically. Nobody spends the next year retyping a regression suite that already works.

Nothing is lost

Conversion happens inside the ALM project or GIT Repo your tests already live in. Test IDs, links, execution history, object repositories, data and shared actions all stay exactly where they are.

Nothing converts until your team approves the effort

The first pass is read only. You see exactly what converts cleanly and what needs attention before anything in your project changes.

Your team starts automating faster from now on

A Python suite is one your engineers can automate against, extend with AI assistance, and hire for. VBScript talent is getting harder to find every year. Python talent is everywhere.

WHY MERITO

Merito is an AI enterprise software partner for Application Security, Quality and DevSecOps, and an OpenText Value-Added Partner. We built Phoenix, and can run the migration with you from assessment through rollout. We also handle the licensing and platform upgrades a modernization depends on, so the whole program runs through one partner.

Start with a read-only assessment of your UFT scripts.

We show you what converts cleanly and what needs attention before anything in your automation project changes.
