

Test Everything, Everywhere, All At Once.

AI-powered testing that cuts test maintenance by 90% and regression cycles by 70%.

Perforce Continuous Testing gives your teams everything they need to keep quality moving as fast as delivery. From performance, API, and functional testing at scale to delivering AI-powered web and mobile testing across real devices. Together with service virtualization and production monitoring, you cover every layer of the pipeline without slowing innovation.

Automate More With AI-Powered Testing

Execute tests without brittle scripts or locators, reuse across browsers, devices, and platforms, and validate visually and semantically in one flow. Extend with SDK augmentation for Selenium and Appium for maximum flexibility.

Continuous Testing That Adapts to Your Delivery

Adopt AI at your pace. Expand coverage where it matters most.

Bring AI Into Existing Tests Seamlessly

Enhance Selenium and Appium flows without disruption. Start with your current frameworks and scale automation without added upkeep.

Confidence in Every User Experience

Validate apps across real devices, browsers, and OSs so quality reaches every customer.

Continuous Testing Without Delays

Simulate unavailable systems, generate data instantly with AI, and eliminate flaky tests to keep delivery pipelines flowing.

Insights That Accelerate Delivery

Reduce noise and find issues faster with Root Cause Analysis, AI-powered Auto-Correlation, and AI Log Analysis.

Eliminate Manual Effort on the Hardest Tests

Free your team from repetitive manual effort and expand automation into the hardest cases — so you deliver more coverage with less effort.

Continuous Testing Without Compromise

Deliver quality at speed without limits. With Perforce Continuous Testing, you get automation that scales, cloud access to real devices, and the ability to keep pipelines moving without tradeoffs between speed and coverage.

- **Keep testing moving by virtualizing unavailable systems:** Remove environment blockers by simulating APIs, mainframes, and third-party services. Reduce environment delays by over 60% and start testing weeks earlier.
- **Identify issues instantly with real-time insights:** Speed up root cause analysis and reduce mean time to resolution with AI log analysis, anomaly detection, and APM correlation across tools like Splunk, Dynatrace, and Datadog.
- **Cut maintenance work with AI-driven automation:** Reduce reliance on production data access through AI-driven synthetic test data generation, and streamline troubleshooting with automated log correlation.
- **Test earlier with seamless CI/CD pipeline integrations:** Integrate directly with Jenkins, GitHub, Azure DevOps, and GitLab to enforce quality gates on every pull request. Catch 40% more regressions pre-release and speed up release cycles by 30%.

How Tabcorp Achieved 90% Reduction in Test Maintenance with Perfecto AI

Tabcorp revitalized its QA operations with Perfecto AI. By shifting focus from code maintenance to user experience, the team achieved immediate and measurable business impact:

- 90% reduction in maintenance and 70% shorter regression cycle
- 60% faster script creation automation of previously ignored minor test cases.
- \$150K-\$200K cost savings (in 3 months)

“Perfecto AI has improved [test automation] by more than 90%. Now, I can redirect my QA team’s efforts to more valuable tasks.”

—Namresh Saraiya,
Lead Automation Engineer

Trusted by Leading Enterprises to Deliver Quality at Scale

Global organizations rely on Perforce Continuous Testing to release faster with fewer escaped defects, stronger coverage on complex apps, and less maintenance drag on teams. Powered by AI-driven automation, it helps enterprises reduce test debt, improve release confidence, and keep innovation moving without tradeoffs.

See how you can achieve continuous quality at enterprise scale. Schedule your personalized demo today.
